                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                         New degenerate primers - used for recovering antibiotic biosynthetic bloma from soil/lichen material claim 19; Page 87-89; 98pp; English.

This sequence represents a peptide synthase clone, isolated from soil. This protein is used in a method for the recovery of antibiotic biosynthetic DNA from humic materials or lichen. The PCR products of the invention have the potential to be used as therapeutic molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                           including antibiotics, immunosuppressors and antitumour agents. The method allows access to the reservoir of genetic diversity in soil pathogenic micro-organisms, in order to find new antibiotics. It also allows access to novel biosynthetic genes/enzymes that can be used to produce antibiotics or produce specific compounds, enzymatically,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                therapy of Huntington's disease

Claim 2: Fig 4: 112pp: English.

This is the amino acid sequence of the human huntingtin protein.

The gene sequence is characterised in that it contains a number of CAG repeats in the 5' region (in this case 23 repeats). In healthy individuals the usual number of CAG repeats in the gene is 11-34, whereas in patients suffering from Huntington's disease (HD), the number of repeats increases to 37-73 or 37-86. The huntingtin gene spans 210 kb and encodes a protein of 348 kD. The gene is found in a 500 kb region between the chromosomal markers b43180 and b43182 and preferentially mapped to the locus 4p16.3. The protein or the gene encoding it, is useful for detecting a predisposition to develop HD, for diagnosis and treatment of HD, especially by antisense and gene
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; huntingtin gene; Huntington's disease; chromosome; marker;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New huntingthin protein and related nucleic acid, antibodies etc.

17. For treatment and diagnosis of neuro-degenerative disease,
27. For treatment and diagnosis of neuro-degenerative disease,
28. Specifically Huntington's disease.
28. Claim 1; Page-22-33; 66pp; English.
29. This sequence is encoded by a large gene, termed "Huntingtin" or
20. Tils" which is present in the proximal part of the 0.5 mb segment
20. This present in the proximal part of the 0.5 mb segment
21. Detween members D45180 and D45182 on chromosome 4. The IT15 gene
20. Spans about 210 kb and encodes a protein of approx. 348 kb. The
20. Intingitin open reading frame contains a polymorphic (CAG) n
21. Intincleotide repeat with at least 17 alleles in the normal
22. Spans about 34 cAG copies.
23. Intingidon's disease (HD) chromosome, the length of the CAG repeat
24. Substantially increased, with between 37 to at least 73 copies.
25. This shows an apparent correlation with age of onset, the longest
25. Segments are detected in juvenile HD cases. The presence of an
26. Substantially increased in juvenile HD cases. The presence of an
27. Substantially increased in juvenile HD cases.
27. The shows an apparent correlation with age of onset, the longest
28. Substantially increased in juvenile HD cases.
28. The presence of an
29. Substantially increased in juvenile HD cases.
29. The presence of an
29. Suggest that this alteration underlies the dominant phenotype of HD.
                                                                                                                                                                                                                                                                                                                                Nay Park-1995 (first entry)
Protein encoded by Huntingtin DNA\III5 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a previously undescribed protein, encoded by a novel gene, termed huntingin or IT15. The huntingtin reading frame contains a polymorphic (CAG) nithucleotide repeat with at least 17 alleles in the normal population, varying from about 11 to 34 CAG copies. Huntington's disease (HD) is a progressive neurodegenerative disorder characterised by motor disturbance, cognitive loss and psychiatric manifestations. The genetic defect causing HD is assigned to chromosome 4. On HD chromosomes, the length of the trinucleotide CAG chromosome 4. On HD chromosomes, the length of the trinucleotide CAG chromosome 4. On HD chromosomes, the length of the trinucleotide CAG chromosome 4. On HD chromosomes, the length of the trinucleotide CAG chromosome 4. On HD chromosomes, the length of the trinucleotide CAG chromosome and proteins encoded by it, may be used for the diagnosis or treatment of Huntington's disease. The huntingtin gene charapy of a symptomatic or presymptomatic patient. The method comprises providing a functional huntingtin gene with a (CAG)n repeat of the normal range of 11.34 copies, or an antisense sequence, to the desired cells of the patient, in a manner that permits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Previously undescribed protein encoded by a novel huntingtin (II15) gene. Huntingin gene; II15 gene; Huntington's disease; trinucleotide repeat; neurodegenerative disorder; HD; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                              Protein at long of the binding of huntingtin to huntingtin-associated protein-1 - useful for screening for drugs for treating or protein-1 - useful for screening for drugs for treating or preventing Huntington's disease [Hz] proteins which specifically bid chamber a such as human huntingtin (Hz) polypeptide (W09871) is the product of the Huntington's disease (Hz) locus. Proteins which specifically bind to the huntington's disease (Hz) locus. Proteins which specifically bind to Huntington's disease (Hz) locus. Proteins which specifically bind to Hz binding between Hz and HaPl is enhanced by an expanded polyglutamine repeat in Hz, the length of which correlates with the time of disease onset. HAPl, in contrast to Hz, is expressed selectively in the brain, suggesting that it may contribute to the brain specific pathology of HD. Hz, or portions of it, esp. amino acids 1-230, or yeast cells expressing that it may contribute to cacids 1-230, or yeast cells expressing thin, can be used to identify cpds. that bind to, displace or prevent binding of Hz and HAPl.

The method is useful for screening candidate drugs for treating, canners and the services and the services of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cells of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 time and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

This amino acid sequence represents the rat p26 protein. The encoding gene sequence was isolated from a rat brain cDNA library by phage plaque hybridisation using the probes V19206 and V19207, followed by primer extension. The screening isolated a product of 545 bp. The 5' and 3' ends of the coding sequence were then obtained by RACE amplification resulting in the isolation of the 875 bp rat p26 cDNA clone. P26 protein is useful as a reagent for screening for compounds having and preventive agent for diseases related to the haematogenic system. Sequence 181 AA,

The sequence is that of telomerase protein plo5, it can be used to rescreen for agents, e.g. antibodies, that modulate binding of human telomerase to its binding target. Those that inhibit telomerase certivity can be used to treat conditions such as cancer, restenosis, inflammation, myocardial infarction, glomerulonephitis, transplant rejection and infections (e.g. with human immunodeficiency virus), while those that are agonists can be used to extend the life of proliferation-restricted cells, especially normal somatic cells, ce.g. in cases of hypersensitivity or atrophy, also to improve production of recombinant proteins by maximising cell density and survival and expansion of precursor cells being used for bone marrow telomerase proteins are isolation, enrichment and concentration of telomerase RNA or proteins, as immunogens; in therapy, as reagent where nascent oligonucleotides of known structure are needed (e.g. the tagging native nucleic acid molecules) and for regulating cell conventions controlly be very specific, e.g. they are selective for cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding human telomerase proteins or their fragments – useful for therapeutic modulation of telomerase activity and for screening for potential modulators of telomerase-target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
- used for therapeutic modulation of telomerase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4; Page 17-19; 32pp; English.

This protein comprises the pl05 subunit of human telomerase. pl05 can be isolated from human cells or expressed in host cells using mative pl05 cDMA (see V05369), or optimised synthetic sequences (see V05370-72). The invention provides methods relating to human telomerase and related nucleic acids, including the subunit proteins pl40, pl05, p48 and p43. The invention also provides isolated telomerase hybridisation probes and primers capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  W46593;

specifically hybridising with the telomerase gene, telomerase-specific binding agents such as specific antibodies, and methods of making and using the subject compositions in diagnosis (e.g. genetic hybridisation screens for telomerase transcripts), therapy (e.g. gene therapy to modulate telomerase gene expression) and in the biopharmaceutical industry (e.g. reagents for screening chemical libraries for lead agents). Modulation of telomerase expression can be used for the treatment or prevention of cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                               Gamma-chicken atrial natriuretic peptide.
Gamma-chicken atrial natriuretic peptide; diuretic; hypertensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Physio-active peptide derived from birds - has cysteine bridge,

New DNA sequence encoding transforming growth factor beta 2 -

New DNA sequence encoding transforming growth factor beta 2 -

New DNA sequence encoding form the tamoxifen-treated, human prostatic

adenocarcinoma line PC-3 and converted to cDNA. TGF DNA is pref. used

for control of the SV40 promoter. and expressed in CHO cells. The simian

SQ is also claimed.

Sequence 442 AA:
                                                                                                                                                                                                                                                        20..21
116..144
/note="This entire SQ is replaced with Asn in simlan
                                                        23-DEC-1990 (first entry)
Sequence encoded by human transforming growth factor (TGF) beta-2
precursor 442 cDNA in pPC-21
Cell differentiation; cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5-DEC-1989; US-46020.

This sequence represents human transforming growth factor-beta 2

(TGF-beta 2). The sequences for human TGF-beta 1 (see R73596) and human TGF-beta 3 (see R73598) are claimed within the scope of the invention.

The invention is a composition consisting of a TGF-beta protein and osteogenic cell source (OCS) formulated in an acceptable carrier other than a bone morphogenic cofactor. This composition can be used for the restoration of bone deficiency. This provides for the generation of mature bone only where it is required, without the inclusion of a specific bone-inducing cofactor. This method can be used with any of the 5 human TGF-beta's or with TGF-beta from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treatment of hypotension, esp. in septic shock - by administering transforming growth factor beta e.g. to inhibit inducible nitric oxide synthase gene transcription.
Disclosure: Fig 18: 52pp; English.
Transforming growth factor beta 2 (TGF-beta 2) has been found to inhibit inducible nitric oxide synthase (iNOS) gene transcription, esp. in interleukin-1-beta (ILI-beta) stimulated rat smooth muscle cells, and at a dose which does not inhibit consitutive NOS. TGF-beta 1 (R83054) or 2 or their active fragments (esp. derived from the carboxy-terminal 112 amino acids), can be used in the treatment of hypotension, such as that associated with severe inflammation or septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             R83055;

Claim 1; Fig la; 58pp; English.

IGF-Beta2 may be used in treatment of tumors at effective doses, and may also be useful in augmenting wound healing by stimulating cell prolliferation. The growth factor can be produced at high levels from a CHO expression system.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2, Application US/08395939A
Patent No. 5604204
GENERAL INFORMATION:
APPLICANT: Anmann, Arthur J.
APPLICANT: Rudmann, Christopher G.
TITLE OF INVENTION: TGF-BETA COMPOSITION FOR INDUCING BONE
TITLE OF INVENTION: GROWTH
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genentech, Inc.
                                                                                                                                                                                               Patent No. 5221620
APPLICANT: PURCHIO, ANTHONY F.; MADISEN, LINDA; WEBB, NANCY
ATLE OF INVENTION: CLONING AND EXPRESSION OF TRANSFORMING
GROWTH FACTOR BETA-Z
NUMBER OF SEQUENCES: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 43; DB 4; Length 16;

Patent No. 592547
GENERAL INFORMATION
GENERAL INFORMATION:
APPLICANT: Williams, Lewis T.
APPLICANT: Williams, Lewis T.
APPLICANT: Cavanaugh, William M.
TITLE OF INVENTION: No. 592554*el Protein Domain Which Binds
TITLE OF INVENTION: Tyrosine Phosphorylated Proteins
NUMBER OF SEQUENCES:
CONTRESPONDENCE ADDRESS:
ADDRESSE: Townsend and Townsend and Crew
STREET: One Market Plaza, Steuart Tower, Suite 2000
GITY: San Francisco
STATE: California
COUNTRY: USA
ZIP: 94105
ZUP: 94105
ZOMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
GURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/551,687
FILING DATE: 01-NOV-1995
FILING DATE: 09-DEC-1994

COMMENT	This e beta	<pre>##Label wAs is enzyme uses ferrous iron as a cofactor, and while beta-hydroxylating the peptidyl-aspartate substrate converts alpha-keroqlutarate to succipate and releases carbon dioxide.</pre>
COMMENT Aspa	Aspart cert subs	Agaptic acid and asparagine residues in the EGF homology domain of certain plasma proteins serve as the peptidyl-aspartate substrate.

#superfamily peptide-aspartate beta-dioxygenase;
tetratricopeptide repeat homology

Cell (1993) 72:971-983
A novel gene containing a trinucleotide repeat that is
expanded and unstable on Huntington's disease chromosomes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lin, B.; Rommens, J.M.; Graham, R.K.; Kalchman, M.; MacDonald, H.; Nasir, J.; Delaney, A.; Goldberg, Y.P.; Hayden, M.R.

Hum. Mol. Genet. (1993) 2:1541-1545

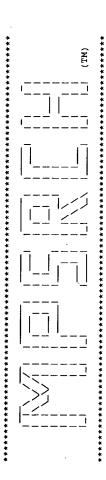

Differential 3' polyadenylation of the Huntington disease gene results in two mRNA species with variable tissue

SMITH J.J., SZILARD R.K., MARELLI M., RACHUBINSKI R.A.;
"The peroxin Peal?P of the yeast Varrowia lipolytica is associated
peripherally with the peroxisomal membrane and is required for the
import of a subset of matrix proteins.";
MOL. CELL. BIOL. 17:2211-2220(1997).

-!- FUNCTION: INVOLVED IN PEROXISOME BIOSYNTHESIS. REQUIRED FOR THE
IMPORT OF A SUBSET OF MATRIX PROTEINS.
-!- SUBCELLULAR LOCATION: PEROXISOMAL MEMBRANE-ASSOCIATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   YARROWIA LIPOLYTICA (CANDIDA LIPOLYTICA).

-!- POLYMORPHISM: THE POLY-GLN REGION OF HD IS HIGHLY POLYMORPHIC (10 TO 35 REPEATS) IN THE NORMAL POPULATION AND IS EXPANDED TO ABOUT 36-120 REPEATS IN HIE NORMAL POPULATION AND IS EXPANDED TO ABOUT 36-120 REPEATS IN HD PATIENTS. THE REPEAT LENGTH USGNALLY INCREASES IN SUCCESSIVE GENERATIONS, BUT CONTRACTS ALSO ON OCCASION. THE LONGER EXPANSIONS RESULT IN BARLIER NORSE AND OCCASION. THE DISEASE. THE ADJACENT POLY-PRO REGION IS ALSO POLYMORPHIC AND VARIES BETWEEN 7-12 RESIDUES. POLYGLUTAMINE EXPANSION LEADS TO ELEVATED SUSCEPTIBILITY TO APOPAIN CLEAVAGE AND LIKELY RESULT IN ACCELERATED NEURONAL APOPTOSIS.
-!- DISEASE: DEFECTS IN HD ARE THE CAUSE OF HUNTINGTON'S DISEASE, AN AUTOSOMAL DOMINANT NEUROBEGENERATIVE DISCORDER CHARACTERIZED BY INVOLUNTARY MOVEMENTS (CHORRA), GENERAL MOTOR IMPAIRMENT, PSYCHIATRIC DISCORDERS AND DEMENTHA. ONSET OF THE DISEASE OCCURS USUALLY IN THE THIRD OR FOURTH DECADE OF LIFE AND SYMPTONS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PROGRESSIVELY WORSEN LEADING TO DEATH IN 10 TO 20 YEARS. IT AFFECTS IN 10,000 INDIVIDUALS OF EUROPEAN ORIGIN. NEUROPATHOLOGY OF HUNTINGTON'S DISEASE DISPLAYS A DISTINCTIVE PATTERN WITH LOSS OF NEURONS, SPECIALLY IN THE CAUDATE AND PUTAMEN (STRIATUM).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -:- SUBCELLULAR LOCATION: CYTOPLASMIC.
-:- TISSUE SPECIFICITY: WIDELY EXPRESSED IN A VARIETY OF TISSUES WITH
THE HIGHEST LEVEL EXPRESSION IN THE BRAIN (NERVE FIBRES,
VARICOSITIES, AND NERVE ENDINGS). IN THE BRAIN, THE REGIONS WHERE
IT CAN BE MAINLY FOUND ARE THE CEREBELLAR CORTEX, THE NEOCORTEX,
THE STRIATUM, AND THE HIPPOCAMPAL FORMATION.
-:- PTM: CLEAVED BY APOPAIN DOWNSTREAM OF THE POLYGUITAMINE STRETCH.
THE RESULTING AMINO-TERMINAL FRAGMENT IS CYTOTOXIC AND PROVOKES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CLEAVAGE BY APOPAIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

```
being and narcolepsy

Example 9; ; 131pp; English.

This sequence represents the 01 mutant of the Drosophila melanogaster

This sequence represents the 01 mutant is an arrhythmic mutation. TIM

is a nuclear translocation protein (NTP) of the invention. The NTPs of

the invention have specific binding activity to a protein involved in

circadian rhythms, and cyclic transcription patterns related to the

sleep-wake cycle. The NTP is also preferably light sensitive, and has a

stabilising effect on the circadian rhythm protein. The NTP also has the

ability to aid the process of circadian rhythm entrainment to
                                                                                                                                        28-MAY.1997 (first entry)
TIM01 mutant protein.
TIM: timeless protein; nuclear translocation protein; circadian rhythm; sleep-wake cycle; light sensitive; environmental cycle; nuclear protein; brosophila period gene; transcription factor; PAS domain; depression; narcolepsy; PER; jet lag; NTP; therapy.

Claim 3: Fig 11: 131pp; English.

This sequence represents the Drosophila melanogaster "timeless" (TIM) protein. TIM is a nuclear translocation protein (NTP) of the invention. The NTP is also protein protein or patterns related to the NTP is also preferably light sensitive, and cyclic transcription patterns related to the sleep-wake cycle. The NTP is also preferably light sensitive, and has a stabilising effect on the circadian rhythm protein. The NTP also has a stabilist to and the process of circadian rhythm entralment to environmental cycles of light. TIM has specific binding activity for the Drosophila period (PER) gene. PER is a nuclear protein which has homology to the family of transcription factors containing the PSA domain, and is a protein involved in circadian rhythms, but the biological function of PER is unknown. The amount of PER fluctuates with a circadian rhythm. The state of the invention, their fragments, agonists, mimics and antagonists are useful for preventing and/or treating disorders of a circadian rhythm for disorders.

Cuch as depression, narsolepsy or jet lag. The products can also be used individuals with the disorders.
environmental cycles of light. TIM has specific binding activity for the Drosophilar period (PER) gene. PER is a nuclear protein which has homology to the family of transcription factors containing the PAS domain, and is a protein involved in circadian rhythms, but the biological function of PER is unknown. The amount of PER fluctuates with a circadian rhythm, and the protein is also phosphorylated with a circadian rhythm. The NTPS of the invention, their fragments, agonists, mimics and antagonists are useful for preventing and/or treating disorders of a circadian rhythm such as depression, narcolepsy or jet lag. The products can also be used for detecting and/or measuring conditions so as to classify groups of individuals with the disorders.

This sequence represents the splice variant of the Drosophila

Comparator Timeless "(TIM) protein. TIM is a nuclear translocation

protein (NTP) of the invention. The NTPs of the invention have specific

transcription patterns related to the sleep-wake cycle. The NTP is also

preferably light sensitive, and has a stabilising effect on the circadian

rhythm protein. The NTP also has the ability to aid the process of

circadian rhythm entrainment to environmental cycles of light. TIM has

specific binding activity for the Drosophila period (PER) gene. PER is a

nuclear protein which has homology to the family of transcription factors

containing the PAS domain, and is a protein involved in circadian

thythms, but the biological function of PER is unknown. The amount of

PER fluctuates with a circadian rhythm, and the protein is also

phosphorylated with a circadian rhythm. The NTPs of the invention, their

fragments, agonists, mimics and antagonists are useful for preventing

and/or treating disorders of a circadian rhythm such as depression,

macsolepsy or jet lag. The products can also be used for detecting and/or

measuring conditions so as to classify groups of individuals with the
                                                                                                                                                                                                                                                       TIM protein splice variant.

The sequences given in R44430-32 are encoded by the eryA fragment of The Sequences given in R44430-32 are encoded by the eryA fragment of the Sacarapolyspora erythraea genome. These polypeptides are involved in the biosynthesis of the polyketide segment of erythromycin. eryA is organised in modules and each module takes care of one condensation step. The precise succession of elongation steps is dictated by the genetic order of the modules. The DNA encoding these polypeptides may be specifically altered such that novel polyketide molecules of desired structure are produced. Three types of alteration may be produced; those inactivating a single function in a module which does not arrest acyl chain growth; those inactivating a single function in a module which does affect chain growth; and those affecting an entire module. The mutations may be introduced by gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Assaying collagen fragments in body fluid by immunoassay - using antibodies raised against synthetic peptide(s) contg. potential crosslinking sites, to diagnose and monitor disorders of collagen metabolism, e.g. osteoporosis.

Disclosure (Appendix A); Page 49; 87pp; English.

Determination of collagen fragments in body fluids can be achieved by immunoassay using antibodies directed against synthetic peptides derived from collagen which contain sites of potential crosslinking. The method is used to diagnose and monitor treatment of disorders of

Determn. of cartilage degradation - using a monoclonal antibody
Determn. of cartilage degradation - using a monoclonal antibody
To measure the ant. of unwound collagen or fragments in samples
Disclosure; Figure 1: 119pp: English.

Type II collagen constitutes the bulk of the fibrillar backbone of
cartilage matrix. It is composed of a tightly wound triple helix
which can only be cleaved by the metalloproteinase collagense to
produce 3/4 and 1/4 length alpha chain fragments. The destruction of
articular cartilage is due, in part, to the degradation of collagen.
Incapable of maintaining its helical structure at physiological
temperatures, collagenase cleaved collagens unwind and become
susceptible to further degradation by other proteinases. By
producing monoclonal antibodies directed against epitopes which are
only revealed when collagen is unwound, the antibodies provide a
means of determining the degredation of cartilage in a biological
supplies used in the production of such antibodies are described in
R55149, R59750 and R67742.
                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
collagen metabolism (degredation of type I collagen may indicate osteoporosis, metastatic progression, Paget's disease, hyperthyroidism or other conditions involving excessive bone resorption; degredation of type II collagen may indicate rheumatoid arthritis or osteoarthritis; and of type III collagen, vaculitis syndrome). The method can also be used to assess the toxicity of a compound and to test drugs for their effect on collagen metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Part manuoassay kit containing two antibodies recognising coupled processes on collagen fragments - and new antibodies, for diagnosing arthritise set., also prognosis and screening for anti-arthritic agents or inhibitors of matrix metallo-protease Disclosure; Fig 2; 57pp; English.

This sequence represents the human type II collagen alpha-chain which is used in a method to produce an immunoassay kit comprising of two antibodies (Abl and Ab2), mono- or poly-clonal, or their fragments, antibodies (Ab1 and Ab2), mono- or poly-clonal, or their fragments, contibodies (Ab1 and Ab2), mono- or poly-clonal, or their fragments, contibodies (Ab1 and Ab2), mono- or poly-clonal, or their fragments, contibodies (Ab1 and Ab2), mono- or poly-clonal, or their fragments, contibodies are designed for sandwich immunoassays, specifically enzyme-linked immunosorbent assay (ELISA), and C-IIfree is systemic (present in urine, serum or synovial fluid). The kits are used for therapy; diagnosis (e.g. coutine screening for arthritis and other cartilage diseases, also to diagnose growth disorders), prognosis (e.g. monitoring progression of remainstoid arthritic agents and matrix metalloprotease inhibitors).

Colligent designed for the vertice of the abpha is plain, have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human type II collagen alpha-chain protein.

Type II collagen alpha-chain; human; immunoassay; antibody; C-IIfree; epitope; cartilage; erzyme-linked immunosorbent assay; ELISA; therapy; diagnosis; arthritis; growth discreer; prognosis; arthritis growth discreer; prognosis; and screening; anti-arthritic agent; matrix metalloprotease inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            by immunoassay using antibodies directed against synthetic peptides derived from collagen which contain sites of potential crosslinking. The method is used to diagnose and monitor treatment of disorders of collagen metabolism (degredation of type I collagen may indicate osteoporosis, metastatic progression, Paget's disease, hyperthyroidism or other conditions involving excessive bone resorption; degredation of type II collagen may indicate rheumatoid arthritis or osteoarthritis; and of type III collagen, vaculitis syndrome). The method can also be used to assess the toxicity of a compound and to test drugs for their effect on collagen metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                  antibodies raised against synthetic peptide(s) contg. potential crosslinking sites, to diagnose and monitor disorders of collagen matabolism, e.g. osteoporosis.

Restoring context inhibition to hyperproliferative cells - by introducing nucleic acid encoding EIA peptide, also promoting introducing nucleic acid encoding EIA peptide, also promoting differentiation, used for treating malignancies

Disclosure; Page 20-22; 41pp; English.

This sequence is encoded by the product of alternative splicing of the EIA RA Such that the information contained within this sequence is a cubset of the larger EIA protein, see also R52602. EIA is an adenotive of the larger EIA protein, see also R52602. EIA is an adenotive of proteins are both transcriptional regulation proteins which facilitate the oncogenic transformation of certain rodent cells by other oncogenes. The adenovirus EIA gene unexpectedly influences the phenotype of human tumour cells so as to restore their contact phenotype of human tumour cells so as to restore their contact inhibitory properties and promote differentiation. Stable-expression of the adenovirus 5 EIA gene reduces anchorage-independant growth and morphology and restore their contact morphology and restore their contact for morphology and restore inhibitoring discussions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Therefore ElA acts as a tumour suppressor gene in this human

                                                   Recombinant viral vector contg. DNA for correcting adrenoleuco-dystrophy - and immunologically tolerable cells contg. That adrenoleuco-dystrophy - and immunologically tolerable cells contg. This sector, useful in gene therapy adrenoleuco-dystrophy. French.

A 2.43 kb Spel-EcoRI fragment of human wild-type ALD (adrenoleucodystrophy) cDNA was inserted into retroviral vector M48 so that it was under control of the mouse phosphoglycerate kinase of that it was under control of the mouse phosphoglycerate kinase of PGK) promoter. The resulting vector was co-transfected with vector PGK-neomycin into amphotropic packaging cell line psicKRP. Neomycin (G418)-resistant transfected cells which were also positive with patient. After two rounds of infection, about 70% of cells were expressing normal ALD protein (ALDP) and integration of M48-ALD was confirmed by Southern blotting. The present sequence is that of

                                                                                                                                                                                                                                                                                                           transformed plants and for evaluation of agricultural chemicals Claim 1; Pages 7-9; Ilpp; Japanese. The presents sequence represents a NADPH oxidase. The CDNA encoding this protein sequence was isolated from a CDNA library of Arabidopsis thaliana. The NADPH DNA and protein can be used in the development of agricultural chemicals. They allow for the control of growth of transformed plants for smooth evaluation of agricultural chemicals.

used for obtaining antigens for assays and vaccines and for used for obtaining antigens for assays

Fig 4: 28pp; English.

Synthetically produced proteins and peptides, characterised in that the Synthetically produced proteins and peptides, characterised in that the Synthetically produced proteins and peptides characterised in that the Synthetically produced from the primary nucleotide sequence of the Virus SBL/ISY or a part thereof, or a degenerate thereof are claimed.

HIV-2 SBL/ISY represents the Complete genome of the virus SBL-6699

(=SBL-6689-85). The proviral DNA was obtd from a genomic library constructed from DNA of HUT-78 Cells infected with SBL-66699 SBS using the lambda-phage vector EMBL-3. SBL-6669-85 was isolated from lymphocytes of a West African woman. Protection is requested for the entire genome clasclosed in R0890 and for parts thereof, and corresp. to arrious genes such as the gag gene (corresp. to nucleotides 514 to 2106), the pol gene (nucleotides 1827-4931) and the env gene (nucleotides 6144 to 8682), the corresp. As sequences and parts thereof and various genius products against various forms the reform or use thereof such as clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            therefrom, or use thereof, such as clones prepd. by recombinant vector method, HIV test devices and methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New immunogenic regions of Papilloma virus 16 E7 protein - useful in vaccines and for diagnosis, and new derived antibodies Example 2; Page 3; 3pp; German.

Example 2; Page 3; 3pp; German.

The sequence extends downstream from nucleotide 667 of a HPV16 DNA expression bank. HPV16 DNA fragments of ca. 100 bp were blunt-end ligated into PvuII-cleaved phage vector fd-tet-J6. Recombinant phages were plated on E. coli K91 and replicated on nitrocellulose membranes probed with specific sera. 200 recombinants reacted and 30 of them were sequenced. This sequence was identified from 5 overlapping clones. The sequence encodes immunogenic regions which are useful in vaccines, to detect specific antibodies against HPV16 E7-protein. Antibodies are also useful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-JAN-1991 (first entry)
